## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-8 and 17 are rejected under 35 U.S.C. 102(a) as being anticipated by Claussen et al. This reference discloses in col. 4, lines 1-25, col. 6, lines 20-40 and example 1 a process comprising mixing a metal and a ceramic material and applying the heated mixture by slip techniques to a substrate. It is the examiner's opinion that applicants' process is anticipated by the reference process.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 9-16 and 18-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Claussen et al in view of Duffield et al, Jin et al and Cliché et al. The limitations of these dependent claims are conventional and do not render these claims unobvious. Cliché et al discloses at col. 4, lines 40-65 thermal spraying inter-metallic metal powders. Jin et al discloses at col. 5, lines 20-30 heating ceramic materials with

laser and infrared techniques. Duffield et al discloses at col. 3, line 50 to col. 4, line 50 plasma spraying or induction heating of metallic powders.
